

NHS Emergency STOP kit

-when extra safety is required.

Of course all NHS woodchippers strictly follows all European standards for Operators Safety (EN13325 and others). But for some markets the EU norms is not enough.

For those markets, NHS offers a special Emergency STOP kit for all machines.
 For retrofitting on existing machines or for new machines
 – directly fitted from the NHS factory (specific ordered for new machines).

The Kit contains all Emergency STOP buttons, other electric parts, circuit plans for connecting and brackets to mount correctly on the machine. The price includes all necessary parts to make a perfect mounting on any NHS Woodchipper.
